

Bad air had kept them from work for a long time. The tunnel was pushed further into the hill in order to tap the vein, and recently they have been expecting cut it. The group is a large one and is supposed to carry Ontario ore, as it goes east from the Ontario beyond the break caused by the porphyry dyke. The owners are Park City men, and for years have labored unceasingly to develop the property, having done over 2,000 feet of work in tunnels, drifts, etc. All indications point to the existence of a body of ore in the group, whether the extension of the Ontario or not. A few days at the most, if the vein has not already before this appears in print, will prove the value of the property and demonstrate to them whether their hopes are to be realized or not.

THE STEAMBOAT.

This is a Snake Creek property and, during the summer, a company known as the Steamboat Mining Company was organized to work the mine on a larger scale than its individual owners had worked it in the past. It was incorporated with a capital stock of \$1,500,000, divided into 150,000 shares, of the par value of \$10; the officers of the company being president, Charles H. Gitsch; vice-president, E. W. Berry; treasurer, R. T. Rimbali. The property consists of a valuable group of ten claims. A tunnel is being run to tap the ledge, which runs through the property at a depth of 1,000 feet. The vein on the surface is very rich, but it is almost inaccessible, making the tunnel a necessity to even make the ore pay. The tunnel is now 488 feet in length, 100 feet in diameter, and it is expected that the season will see the tunnel run to the ore and the property thoroughly developed.

THE BOGAN

has developed into something more than a mere prospect this year. It consists of three claims lying west of the Silver King. A shaft has been sunk in the Camp claim, following all the distance a promising vein, averaging from one and one-half to two and one-half feet in width. The showing made on the ledge was sufficient to induce the owners to make a company to actively develop it. This was done in November, the capital stock being placed at \$1,250,000, the par value of the shares being \$10. John Bogan is president; W. J. Bogan, vice-president; M. C. Scully, secretary, and James Bogan, treasurer. During the year \$8,000 in development work has been done. A building, 22x40 feet, serving as a shaft house, blacksmith shop, etc., has been erected, besides a 14x16 feet two-story boarding house. The property is in good condition for an active season of work, and 1893 will witness more improvement in this property than the present year.

THE ROSEBUD GROUP

belongs to Smith Ebenger, a man who has worked for years to bring his property, almost single handed. He has ten patented claims and has developed them through two tunnels. During the present year, for a few months, efforts were made to make connections between the two tunnels by an upraise from the lower one in order to ventilate the mine, but failed, the air having become so foul that work could not be prosecuted. Good veins have been uncovered in this property which give every promise of permanency and richness. During the year there were prospects of a company being organized to actively develop it, but the negotiations in some way fell through. It adjains the Anchor on the west and is generally considered to be one of the best properties in the Park and it is only a question of time when it will reward the years of persistent labor and unbounded faith of its owners.

THE PIONEER

lies on Pioneer hill south of the Anchor. It consists of one of the largest groups in Park City and is generally considered to carry the extension of the Anchor vein to the south. George Pierson, who controls the property, has worked it this year on the west end and has uncovered a good vein in different places. Hundreds of feet of work has been done in tunnels, shafts, drifts, etc., enough to demonstrate that a mine can be made of the property. Mr. Pierson has succeeded in interesting an English syndicate in the property and they have bonded it for \$100,000, with a guarantee that \$20,000 shall be put up to commence the running of a deep tunnel through Pioneer hill, on May 1, 1893. With this in view it is quite likely that before another Christmas comes around the Pioneer will have proven its value.

THE LUCKY BILL

company has continued to steadily push the property to the front during 1892. All assessments on the stock have been paid promptly, the stockholders having great faith in the future of the mine. It lies east of the Anchor on Flagstaff hill. It is being developed through a shaft. Drifts to the ledge from the different levels have found it to be well defined and as depth is gained, to become more and more mineralized. Connections were made some time ago, by a drift, with the old shaft, thus providing means for ventilation. A hoisting engine was recently purchased and placed at the mine, the company having decided to sink the shaft much deeper. Suitable buildings have been erected and the property is in condition for active work. The Lucky Bill stock is principally owned in Salt Lake and Park City.

THE NORTHLAND

People have been quietly working their property throughout the year, keeping a force of from six to ten men at work. Stopping, drifting on the vein and raising to the surface have occupied the time of the force employed. A small quantity of ore has been shipped. It is the intention of the lessees to continue to work the property during 1893, and quite likely on a somewhat larger scale. The lessees and part owners of the Northland are W. A. Wilson, Sam Stephenson and Ezra Thompson. Their suit against the Mayflower lessees which had been in the courts for over two years had made the mine famous. It is not yet settled. The property lies immediately south of the Mayflower and Silver King, and embraces four claims. The lessees are satisfied with the outlook for the property.

THE MONTREAL

The Montreal is in Snake Creek district, and owned by the Montreal Mining company, a Salt Lake corporation. The officers of the company are, J. M. Dart, president; J. C. C. Glanfield, vice-president; W. L. Pickard, secretary, and J. L. Woodmansee, treasurer. A tunnel 68 feet has been run in the property, the object being to tap the vein at a depth where it can be worked to advantage. The property was not worked during the summer, but work has just been resumed, the intention being to push the tunnel to tap the vein, a distance of 120 feet. A shaft sunk on the vein 100 feet shows ore all the way. The cutting of the vein in the tunnel will decide the future of the property.

THE W. R. C.

is another blue ledge property that has good prospects. L. H. Farnsworth of

Salt Lake, James Pierce, Mrs. J. Hall and E. Cadwell of Park City are the principal owners of the group, which contains four claims. It has a good vein, ten inches in width, that assays 30 ounces silver, 22 per cent. lead and \$2 in gold. Considerable work has been done with a view to develop the vein. A shaft was sunk this year 75 feet and a crosscut run 70 feet towards the vein but water was encountered and work was stopped. A tunnel was also run which tapped the vein. This was drifted on for 30 feet when work was stopped for the season. Work will be resumed in the spring.

THE DAILY WEST.

owned by John J. Daly and R. C. Chambers, consists of a large block of ground lying between the Daily on the north and the Anchor on the south. The work of developing it commenced a little more than a year ago, and since that time over \$75,000 has been spent in improvements, machinery and in sinking the shaft to a depth of 1,000 feet, besides drifts of exploration. No one could know this ground better than its owners, and they are not the men to spend a fortune on mere prospects. The Daily West will one day be one of the big properties of Park City. It is well equipped with machinery, etc. It has been actively worked all the year until a week or so ago.

THE APEX

has had a new experience this year, having been operated for a few months past. The property has been practically idle for a few years, no work having been done other than that done by lessees. There is no doubt but that the Apex has the Crescent vein, but more money than the company seems to possess is needed to develop it. The upper works have yielded considerable ore and shipments are now being made, the ore of which assays well. Backed by an energetic company the Apex would become a fine property.

THE COMSTOCK.

Morris Dusseldorf, the manager of this mine, upon his return from Europe in the summer, announced that the mine was to be reopened and vigorously developed. It is still idle but there is some hope of something being done with it next year. It lies in Thayne's canyon, opposite the Crescent and has had enough work done in it to prove the existence of

oping the group. This year they have run a small tunnel on one of the claims. The Ontario drain tunnel passes through the group at a depth of 2140 feet and it is claimed that a 4-foot vein of rich ore was cut in the tunnel. Some interesting developments may be expected from this property during the coming year.

THE WEST END

gives promise of becoming a valuable property, the stockholders having evinced a desire at the last meeting to see it thoroughly developed. During the year the old tunnel has been extended 75 feet, and only recently another contract was given to push it 100 feet further. The property embraces a large group and lies on Pioneer hill at its junction with the Jupiter ridge and the Big Cottonwood divide. A shaft has been sunk 100 feet, all in ore of low grade. The tunnel is intended to tap this vein at depth, the expectation being that like other veins here it will grow richer with depth.

THE UNION

lies east of the Glencoe, in Blue Ledge district, and consists of eight claims. J. H. Deming, Reese Williams, Thomas Charles and W. C. Wallace are its owners. They recently stopped work, having run a tunnel ninety feet this year. They have an old tunnel 180 feet long, and a shaft seventy feet deep on the property. The object of their work is to tap the Glencoe vein, which passes through the Union in its easterly course. The Union people have great faith in their property and will continue to develop it during 1893.

THE LITTLE BELLE

lying southeast of the Daily West, has not improved any this year, no explorations having been made further than was necessary for assessment work on the unpatented portion of the property. This was done in the Little Belle tunnel No. 2, it having been run sixty feet, and in an incline in the No. 1 tunnel. Consisting of nine claims and situated in the most favorable portion of the Park for mineral, the Little Belle cannot but be a valuable property. Litigation has kept its owners from actively developing it.

THE ROSSCAMP-GLENN

group of claims in Thayne's canyon, opposite the Apex, has developed into a promising mine this season. Dr. E. P.

H. Dodge, A. B. Richardson and E. P. Ferry. It has been operated to some extent, and ore has been found in different places on the group.

THE MASSACHUSETTS

company seems perfectly contented to let their property lie idle. No work has been done this year. M. R. Evans, of Salt Lake, worked hard to interest Chicago capitalists to take hold of the mine and develop it, but so far success has not attended him. If the stockholders had one-half the faith in the Massachusetts that Mr. Evans has, it would have been a paying property long before this.

THE MORNING STAR

which a year ago was so full of promise, has retrograded somewhat. The vein did not prove fruitful and the lessees gave up their lease. A. J. Luback, the owner, has done some work on it this season, principally in a tunnel from the north to cut the vein at depth. The Morning Star is in a favorable situation and with judicious work should become a shipper.

THE PARK CITY

Mining company's ground is now controlled by the Silver King company, the members of that company having bought sufficient stock for that purpose. The property lies south of the Silver King and Northland and is considered first-class. It is quite likely that its future development will be carried on through the Silver King.

THE PARK VIEW

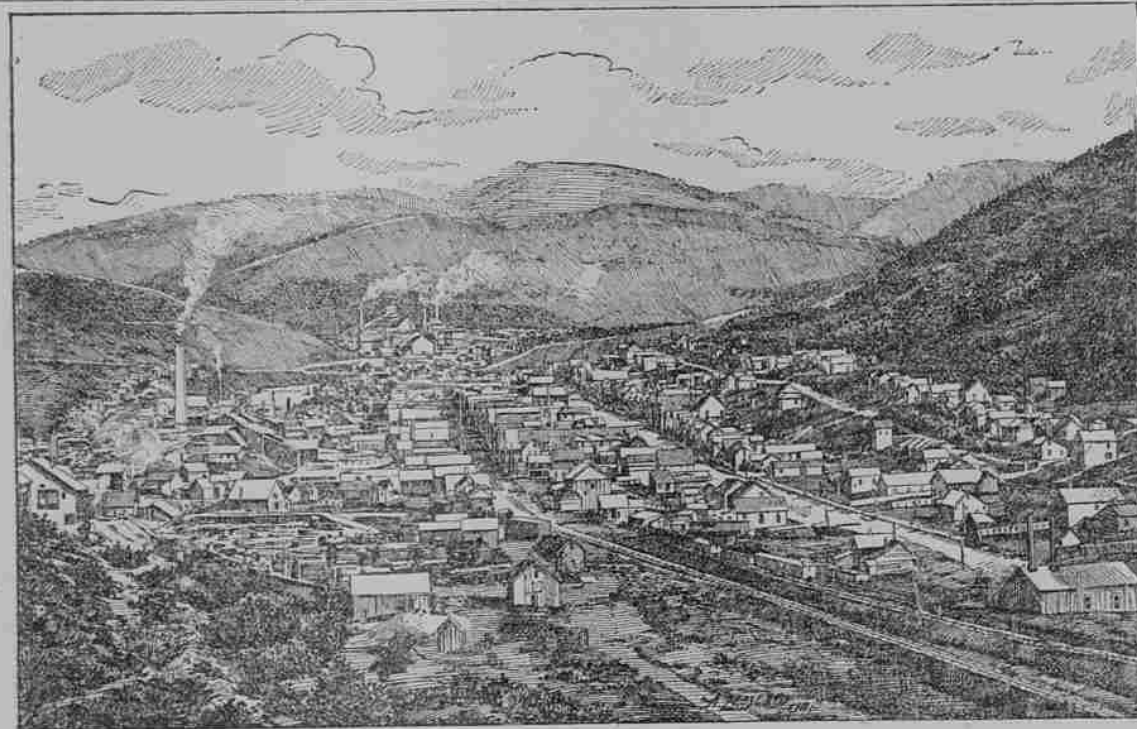

has been worked recently, in two different places, one just below the Woodside and the other in Empire canyon. It embraces three claims, and from the present indications it will prove a valuable property. Thomas Cupet and H. Kilkeny are its owners.

THE NEW YORK

belonging to John Rogers, John Green and A. B. Richardson, and lying south of the Ontario, has been quiet. It will be worked next year, as the owners have both the faith and the money necessary to bring the property out.

THE HIMALAYA

was worked for a few months during the present year, the shaft having been sunk fifty feet, making it now 150 feet. This property is in Iron canyon. It is owned

BIRDS EYE VIEW OF PARK CITY.

a good vein, but depth is needed and the company don't want to put up the amount to secure it. The stock is held principally in London.

THE M'HENRY.

at one time supposed to be the best mine in the Park, is again lying idle on account of the unwillingness of the company to develop it. It lies in Blue Ledge district, over the hill easterly from the Ontario. Messrs. LeCompte and Giles worked it for a time this year under lease. They stopped up from the tunnel about two hundred and fifty feet, taking out fifty tons of ore. The vein was small, from two to ten inches, and the ore going only 30 ounces silver and 20 per cent. lead. It was an unprofitable scheme for the lessees and they gave up the lease.

LeCompte and others have worked it under lease and have taken out considerable low grade ore. Being base, it required concentration, for which a set of rolls and a few jigs were erected. The ore was found in an incline from the California tunnel and in some places was quite rich. A force of twenty men have been employed.

THE CONSTELLATION

lying northeast of the Ontario, consists of a group of five claims. A tunnel has been run 500 feet in the property since Jan. 1 last to develop it. It is controlled by the Constellation Mining company. The stockholders are confident that they will yet develop a fine property.

THE SILVER KING

a property that was operated quite ex-

almost entirely in Salt Lake. It carries a small vein of high grade ore, but has not been developed sufficiently to prove its real value.

THE CREOLE

is owned by David Condon and lies on Treasure hill, just west of town. It has shipped considerable ore in the past, but this year the shipments were light. Considerable work has been done this year in a drift running south from the shaft and in the old works.

THE GLENCOE

has employed a force of twenty men during the year. Connections were made with the upper works, a shaft sunk from the tunnel level, and some drifting done. The concentrator was operated for a couple of months and put out 150 tons of concentrates.

OTHER PROPERTIES.

Among the other properties that have been operated more or less in the past and have made good showings are the Southern Tier, Dalberg, Black Diamond, West Ontario, Kerr, Dahlgreen, O'Donovan, Kennedy, Union, Baltimore, Bass, Morey, Steele, Whitehead, Great Eastern, Wasatch, Putnam, Eagles Nest, Deer Valley Consolidated and Rochester. Some of these have been worked recently and at present the indications for making good properties are very flattering. C. A. SHORT.

Utah's shoe factory employs Utah laborers and makes every grade of shoe wear from the hides of Utah cattle.

Cumaco takes its name from the West India group where the Dutch first made this drink.

Queen Anne was so devoted to brandy that her subjects called her "Brandy-faced Nan."

A Dollar Saved is a Dollar Earned.

Most persons who have money appreciate the necessity of dealing with a banking institution that is well managed and financially sound; for they want to know that the cash will be ready when they need it. Should fancy dictate the purchasing of Groceries, Hardware, Furnishing Goods, Dry Goods, Clothing, etc., the same care should be taken to find a firm that will give a dollar's worth for a dollar. Few people know the exact value of our goods, no matter how they examine them. Therefore, they have to depend upon the say so of the merchant with whom they are dealing. There is one house in Park City, where can be found a well selected stock of

General Merchandise

Consisting of

Groceries and Provisions, Furnishing Goods, Dry Goods, Clothing, Hardware, Etc.

Bought from first hands, without the payment of commissions brokerage, and purchased in such quantities that entitle them to all possible advantages in freight rates, etc., and upon whose representation you can always rely. That house is the well known one of

Dry Goods, Clothing, Fancy and Staple Groceries, Crockery,

Glassware, Hardware, Etc.

HEADQUARTERS FOR MINING SUPPLIES.

A Full and Complete Line of Gent's Furnishing Goods.

Visitors are Always Made Welcome.

PARK CITY BANK BUILDING.

THE ROARING LION

is owned by Sam Levy, of Salt Lake, and Barney Riley, of Park City. It lies west of the Crescent. Up to Oct. 1st it was operated by Pat Sullivan and others under lease. The work done by the lessees this year consisted of 330 feet in an incline, 55 feet drifting, besides numerous stopes, winzes, etc. Five hundred tons of ore of a high grade were extracted. The property is now idle, but it is understood that the owners will work it during the coming year.

THE SHIELDS-NEWELL

property, in Blue Ledge district, is one of the most promising in the district. It lies east of the Ontario 1800 feet, and consists of seven claims, all patented. Henry Shields and Henry Newell are its owners and have spent considerable money devel-

opment in 1891, has been idle this year, due principally to the death of one of the lessees. It is owned by a company of residents of Tullahoma, Ill. It lies on the line of the Crescent vein, and with its ten claims, forms a good group. To make it a success, it would have to be operated on a large scale, a proposition that its owners do not look upon with favor.

THE GEM

has produced some low grade ore, but for a time has been idle. It was worked for a while under lease. The Gem has an 18 inch vein of low grade ore.

THE KENTUCKY

is one of the valuable groups that will be worked during the coming year by the tunnel to be run from Nigger gulch to the Silver King. It consists of a group of twelve claims, all patented, owned by W.
